

Results

- Predictor variables by importance:
 - Victim injured severely / fatally
 - IO: (attempted) homicide
 - IO: sexual abuse of children
 - Self-harm during current hospitalisation
 - IO: threat, coercion
 - IO: Property crime with violence
 - PANSS at admission
 - Experience of poverty in childhood / adolescence
 - Hallucinations in Past Psych Hx

Discussion

- Influence of severity of IO on LOS
- “[LOS] was determined by factors seemingly invariable by therapeutic efforts”?
 - IO blinding institutions so that positive treatment effects ignored
 - Higher barrier to being released for more severe IO
 - Political considerations for public safety
 - Non-optimal aftercare conditions
 - ?severe IO == high risk of reoffending
